Change in Canada's Trade with the United States

Canada's imports and exports with United States and Rest of the World changed in sync with each other. That changed when US President Donald Trump imposed tariffs on Canada.

A clear change is visible in 2025, where Canada's trade with the US decreased and that with the Rest of the World increased.

Constant trade uncertainty is leading Canada to diversify its exports, moving away from heavily relying US.

Strong decline in metal based exports to the USA on account of 25% US imposed [tariffs](#) in March 2025, which were later increased to 50% in June 2025.

10% US [tariffs](#) on certain energy products led to a 7.24% decline in exports to US and 22.52% increase in exports to other countries.

25% [tariffs](#) on wooden products and cabinets may be a reason for decline in trade on consumer goods between US and Canada.

A major shift away from US can be observed in the Metal ores and Metal and non-metallic mineral products, with China and UK replacing a major chunk of trade.

A notable exception is the increase in trade in Aircraft and parts, on the backdrop of Airbus A220 aircraft orders from US operators like Delta Airlines, as well as Bombardier aircraft orders from BOND, a private jet club backed by US private equity firms.
